INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No. PCT/US2004/017842

	Box	No. I	Basis of the report
1.	With filed,	regard unless	d to the language , this report is based on the international application in the language in which it was s otherwise indicated under this item.
	□ 7 v	This re which i	port is based on translations from the original language into the following language, is the language of a translation furnished for the purposes of:
		□ pub	ernational search (under Rules 12.3 and 23.1(b)) plication of the international application (under Rule 12.4) ernational preliminary examination (under Rules 55.2 and/or 55.3)
2.	have	e been	d to the elements* of the international application, this report is based on <i>(replacement sheets which furnished to the receiving Office in response to an invitation under Article 14 are referred to in this originally filed" and are not annexed to this report):</i>
	Desc	ription	ı, Pages
	1-14		. as originally filed
	Clain	ns, Nu	mbers
	1-20		as originally filed
	Draw	vings, 9	Sheets
	1/8-8/	3/8	as originally filed
		a sequ	uence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing
3.	[☐ the☐ the☐ the☐ the	mendments have resulted in the cancellation of: e description, pages e claims, Nos. e drawings, sheets/figs e sequence listing (specify): y table(s) related to sequence listing (specify):
4.	had Sup _l	not be plement the last the la	eport has been established as if (some of) the amendments annexed to this report and listed below the made, since they have been considered to go beyond the disclosure as filed, as indicated in the intal Box (Rule 70.2(c)). It description, pages to claims, Nos. It drawings, sheets/figs to sequence listing (specify): It does not be amendments annexed to this report and listed below the made in the disclosure as filed, as indicated in the intal Box (Rule 70.2(c)).
	*	If it	tem 4 applies, some or all of these sheets may be marked "superseded."

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No. PCT/US2004/017842

E	30)	No. II Priority
1. [This report has been established as if no priority had been claimed due to the failure to furnish within the prescribed time limit the requested: □ copy of the earlier application whose priority has been claimed (Rule 66.7(a)). □ translation of the earlier application whose priority has been claimed (Rule 66.7(b)).
2. 🛭	⊠	This report has been established as if no priority had been claimed due to the fact that the priority claim has been found invalid (Rule 64.1). Thus for the purposes of this report, the international filing date indicated above is considered to be the relevant date.
3. /	Add	litional observations, if necessary:
		No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial blicability; citations and explanations supporting such statement

Re Item V.

1 The following document are referred to in this communication:

D1: US-B-6 445 5051 (MORGAN DANIEL J) 3 September 2002 (2002-09-03)

D2: US-B-6 567 1341 (MORGAN DANIEL J) 20 May 2003 (2003-05-20)

- 2 INDEPENDENT CLAIM 1
- 2.1 The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claim 1 is not new in the sense of Article 33(2) PCT.

Document D1 discloses (the references in parenthesis applying to this document):

A method for operating a sequential color display system including a color changer and an imager, which operate in combination to sequentially illuminate at least one pixel with each of a set primary colors (abstract; fig. 1), comprising the steps of: applying a control signal to the imager to cause the imager to illuminate at least one pixel for each primary color at a brightness level in accordance with the control signal (col. 1, lines 33-52);

using light occurring during at least one first spoke, corresponding to a first interval when the color changer transitions from one color to another, when at least pixel has a brightness level above a first prescribed threshold for at least one color (col. 6, lines 51-61 and col. 7, lines 28-44); and

altering the control signal when the light is used during such spoke to decrease brightness of at the least one color in substantial time proximity to the occurrence of the spoke to compensate for the brightness increase caused by using the light during such spoke (col. 11, lines 20-23).

Therefore the subject matter of claim 1 is not new (Article 33(2) PCT).

2.2 It should be noted that the main idea of the teaching of D1 is the use of white spoke light which is done by averaging the light of the individual spokes that occur upon rotation of the color wheel, whereas the present application is more concentrated on

the use of individual spokes.

However, the subject matter of claim 1 falls within the scope of the teaching of D1 because there is no indication in the claim that a single spoke will be used independently of the other spokes and the brightness of only a single primary color will be decreased.

Furthermore, the individual use of spoke periods is also anticipated as an additional feature in D1 (see col. 12, lines 15-29).

- 2.3 In claim 1, the feature of decreasing the brightness in substantial time proximity is not formulated in such a manner that it would add anything to the novelty or inventiveness of the subject matter of the claim because the term is vague and unclear and does not suggest any restriction on the time difference between the occurrence of the spoke and the decrease of the brightness.
- 3 INDEPENDENT CLAIM 7
- 3.1 The independent claim 7 includes the features of claim 1 except that the "control signal" in claim 1 is replaced by the "plurality of pulse width segments". As the device disclosed in D1 involves a DMD, it is an implicit feature that the control signal contains pulse width segments (see also col. 11, lines 45-52).

Therefore, the subject matter of the independent claim 7 is also not new (Article 33(2) PCT).

- 4 INDEPENDENT CLAIM 15
- 4.1 The subject matter of claim 15 corresponds in terms of system features to that of claim 1. Therefore the negative opinion regarding the claim 1 also applies, mutatis mutandis, to independent claim 15 of which the subject matter is thus not new.
- 5 INDEPENDENT CLAIM 11

5.1 The present application does not meet the criteria of Article 33(1) PCT, because the subject-matter of claim 11 does not involve an inventive step in the sense of Article 33(3) PCT.

The subject matter of independent claim 11 comprises the features of claim 7 which is not new and the additional feature "... to decrease pixel brightness during the pulse width segments occurring substantially immediately before and after the at least one first spoke in order to compensate for the brightness increase from the spoke light".

The vague and relative term "substantially immediately before and after" does not introduce any restriction on the time when the "altering step" is applied and thus it does not indicate how the intended technical effect is achieved. Therefore the subject matter of claim 11 does not contain any additional feature that meets the requirements of Article 33(1) PCT in respect of inventive step.

6 DEPENDENT CLAIMS

- 6.1 Dependent claims 2-6, 8-10, 12-14, 16-20 do not contain any features which, in combination with the features of any claim to which they refer, meet the requirements of the PCT in respect of novelty and/or inventive step, the reasons being as follows:
- 6.2 The additional features of dependent claims 6, 20 are also disclosed in D1 (see col. 11, lines 45-52).
- 6.3 The subject matters of claims 2 and 16 do not involve an inventive step for the same reason as mentioned in paragraph 5.1.
- 6.4 The subject matters of 3, 4, 5, 8, 9, 10, 12, 13, 14, 17, 18, 19 appear to be obvious measures for the skilled person, in the light of the teachings of D1 and D2 which are in the same technical field, for the following reason:

The difference of the subject matters of said claims from D1 is that they use different first and second threshold values for different primary colors. The technical problem to be solved by said claims appears to be using the spoke light also for saturated

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY (SEPARATE SHEET)

International application No.

PCT/US2004/017842

images.

The document D2, which is in the same technical field, discloses a method that uses the spoke lights not only to boost the white level of de-saturated images but also to boost the secondary colors of saturated images (see D2 abstract; col.9, line 54-col.10, line 35). Therefore it appears to be an obvious option to include the additional features of the subject matters of said claims in a method like the one disclosed in D1.

7 REMARKS

7.1 Although claims 1, 7, 11 have been drafted as separate independent claims, they appear to relate to the same subject-matter and to differ from each other only with regard to the definition of the subject-matter for which protection is sought. The aforementioned claims therefore lack conciseness and as such do not meet the requirements of Article 6 PCT.
